

Java License Analyzer

Description

Your Java Licensing Copilot

The Java License Analyzer helps you manage the new compliance bugbear at every enterprise worldwide. We have created an almost fully automated tool that gives insights into your Java deployments.

It can help you get visibility of all (Oracle & non-Oracle) Java deployments, track how much Oracle Java you are using and identify remediation and rebalancing possibilities. Using these results, you can calculate the commercial value of Java usage in your company.

The tool is available in two variants:

1. **Java License Analyzer – Standard Edition**
2. **Java License Analyzer – Premier Services Edition (includes the Standard Edition features + consulting services)**
